Please could somebody help me with a problem i am having using Media Convert? When i try converting from a URL I get the error message : URL Error or Download Rate Too Slow every time. I never used to have this problem at all. I have tried different URL's of various different file sizes but none of them work. What i am trying to do is split mp3 files into smaller sections so i can download them to my phone. Help... I found Media Convert really useful when it was working but now it doesn't seem to work at all. Maybe there's a problem at your server end? Thanks. I'll check back soon hopefully for a solution.
