Hello!

I saw media convert can convert NSV (nullsoft video format) vidéos to any other video format... but not convert video TO nsv....

It would be really good for all webTV who want to convert their video before broadcast them.

There are the NSV format specification (bitrates, headers, technical spec):

- <http://ultravox.aol.com/NSVFormat.rtf>

And the library for this format:

- <http://ultravox.aol.com/nsvlib.zip>

I think even if there are no direct converting solution for produce this format, with format technical informations, it must be possible to "recreate" this format...

Thanks for your future work!
